

ABSTRACT

An easy-to-gasp sputum collecting tool facilitating sputum collection work. The present sputum-collecting tool has a sputum-collecting device with a base part having a sputum-collecting portion for collecting sputum at one end and a handle portion at the other end, and a collection sample container for receiving the sputum-collecting device inside it. Grip faces positioned at both ends in a thickness direction of the handle portion are formed substantially flat, and a left/right width dimension of the handle portion is set larger than a left/right width dimension of the base portion.
